

Intelligent Document Processing (IDP)

Intelligent Document Processing (IDP) uses Artificial Intelligence (AI) and Machine Learning (ML) to automatically extract, classify and process information from documents – whether they're structured (like forms) or unstructured (like emails or contracts). It takes the hassle out of manually entering data, turning documents into usable, actionable information, making processes faster, smarter and more accurate.

Problems IDP solves:

Often, businesses are relying on outdated, manual document processing which can lead to:

A lot of time spent on entering data manually

Slow decision-making due to inefficient workflows

Higher chances of mistakes when extracting and sorting information

High operational costs, from paper-based or unstructured document management.

With IDP this can all be automated, meaning you get the right data from the correct documents in real-time. This reduces errors and improves both speed and daily operations across an organisation.

Challenges IDP overcomes:

When processing documents the challenges cover more than just scanning or saving files. They also cover:

Manual data entry: a time-consuming tasks, leading to inefficiency and potential mistakes.

Unstructured Data: Documents like contracts, invoices or emails are often hard to manage because they don't have a set format.

Our IDP solution can help businesses in several ways:

Efficient Document Management:

Replaces manual data entry performing automatic extraction and processing of document data – improving accuracy and speeding up workflows.

Faster Operations: Automating document processing means faster decisions, smoother workflows, and less bottlenecks.

Better Accuracy and Compliance:

Reduce the risk of human error and ensure documents meet compliance standards with improved accuracy.

Lower Costs: With less time spent handling physical documents and fewer resources needed for manual entry, lowering overhead costs.

Scalable for Growth: As the volume of your documents increases, our solutions grow with you – handling higher workloads without requiring more staff.

AI-Driven Insights: Gain valuable insights from your documents using AI analytics, to help make smarter business decisions faster.
